**Description**

Is it possible to have a custom field which belongs to multiple type?
One situation is that when create one New Issue and need to enter F/W version
The F/W version could be a well known released F/W version or a dynamic daily build version
For a released F/W version, It could have the type of "List".
For a dynamic daily build version, it could be the type of "text"

Or if there is an existed feature can resolve this situation, please kindly let me know

Thanks

### History

**#1 - 2012-08-07 09:11 - Wim DePreter**

+1
Maybe it's easier to define the field as a Text Field, but with a combobox of predefined values (list, versions, user, ...) to choose from.
The user can choose to select an existing value or enter a new one (entering a new one doesn't change the list of predefined values).
I see also some correlation with #10953
