| **Target version:** | 0.8.7 | | |
| **Resolution:** | Fixed | **Affected version:** | |

**Description**

There's an error in wiki when the preformatted text is a xml and has a tag that starts with the string 'pre'. It seems to be searching the string '< pre' (without the space). Here's an example:

```
<prepared-statement-cache-size>32</prepared-statement-cache-size>
```

Next line, it should be outside the 'pre'
