Redmine - Patch #28618

Datepicker is called incorrectly

2018-04-24 14:12 - Elena Krasnopolskaya

Status:	New	**Start date:**	
Priority:	Normal	**Due date:**	
Assignee:		**% Done:**	0%
Category:	Calendar	**Estimated time:**	0.00 hour
Target version:	Candidate for next minor release		

Description

When calling Datepicker an array of objects was passed incorrectly: at the time of the call $(input).datepickerFallback("option", "defaultDate", default_date); [application.js:689] in array is passed 3 arguments, but in [application.js:216-217] one argument is passed to the function. Function is declared $.fn.datepickerFallback = function(options) [application.js:836] with one argument. Therefore when calling the "real" Datepicker only one argument is passed instead of three.

The attached patch fixes this.
