<b>Description</b>			
The attached patch, which was extracted from <a href="#">Planio</a> , adds an issue query column that represents the estimated remaining time to completion, calculated from estimated time and done ratio.			
The main use case here is to get a quick estimation of the remaining effort for completion of a group of issues by adding the column in the query totals.

This is a nice addition, but I think we should develop more this feature in order to add this info also to issue page and roadmap. On top of this, we should make this behaviour configurable in order to support also the feature from [#24277](#).
