Description

Hi,

- **In public/javascripts/application.js**
  The wiki toolbar preview event is written like this :

```
    $('#content').on('click', 'div.jstTabs a.tab-preview', function(event){
...
```

- If we re-write it like this, dynamic added wiki content preview (like the one in modal windows) will work :

```
  $('body').on('click', '#content.scrum div.jstTabs a.tab-preview', function(event){
...
```

History

Sorry, wrong syntax in description

- original javascript :

```
  $('#content').on('click', 'div.jstTabs a.tab-preview', function(event){
  ...
```

- Enhancement :

```
  $('body').on('click', '#content div.jstTabs a.tab-preview', function(event){
  ...
```

It is useful in plugins that have dynamic popups like popup windows.

Thanks a lot in advance to study this simple enhancement.
