Target version:			
Resolution:			

**Description**

Currently, when designing the workflow for a Tracker allows the standard and custom field status to be set as either "normal" (blank selection), "read-only" or "required". Could we please have another option added as "clear" or "reset"?

The logic behind this request is having the ability to clear certain issue fields when a specific issue status is set. For example, setting the "Target Version" field to "Clear" when an issue gets a status of "Rejected" would remove a rejected issue from whatever Roadmap it was previously assigned to.

History

+1  
Sometimes I want to clear a custom field when creating a issue by copying another issue.

#2 - 2018-02-01 08:46 - Boris Piyavsky

+1  
It is of vital importance, as far as I see.
