

Good afternoon !

Regarding the custom fields, there is a very important functionality for the project, which is the list of values for items in the list, I saw that the option “Key / List of values” was implemented.

Suggestion: Creation of the custom Field: “Code / List of values”

Campos personalizados » Tarefas » Novo ca

The image shows a configuration form for a custom field. The 'Formato' dropdown menu is open, displaying various options. The option 'Chave/Lista de valores' is highlighted in blue. A blue arrow points from this option to a text box below the menu containing the text '“Codigo/lista de valores”'.

Formato	Texto
Nome *	Arquivo
Descrição	Booleano
	Chave/Lista de valores
	Data
	Decimal
	Inteiro
	Link
	Lista
	Texto
	Texto longo
	Usuário
Versão	
Tamanho mín-máx	
Expressão regular	

The image shows the final configuration view for a custom field. The 'Formato' field is set to '“Codigo/lista de valores”'. The 'Nome' field is 'Name 1'. The 'Descrição' field is empty. The 'Múltiplos valores' checkbox is unchecked. The 'Possíveis valores' field contains a list of three values: 'Valor 1', 'Valor 2', and 'Valor 3'.

Formato	“Codigo/lista de valores”
Nome *	Name 1
Descrição	
Múltiplos valores	<input type="checkbox"/>
Possíveis valores	Valor 1 Valor 2 Valor 3

After creating the field, the following view will be generated: (With code)

Campos de valores	[1] Valor 1
Disponíveis	[2] Valor 2 [3] Valor 3

Código

(Sem código)

Campos de valores	Valor 1
Disponíveis	Valor 2 Valor 3

Código

This way I can create a relationship structure between the values of the type field (code / list of values) so that only my relations appear in the list.

campo 1	Valor 1
campo 2	Valor 2
campo 3	Valor 2 valor 3

This was only possible because from the code I can relate the values of the fields.

It is necessary that it is possible to relate the code of a value so that I can generate customized lists with specific values when it is a list.
