Description	
<p>I sometimes want to create very small but very helpful plugins that will contain a few javascript+html lines to help the UI in some screens.</p> <p>Examples:</p> <p>Tracker/edit : hierarchy mode button (tick/untick subprojects of ticked project)</p> <p>_attributes : add javascript to insert a "disabled" attribute on an attribute</p> <p>I don't want to override the view because I think the methodology of overriding views when you need to manage multiple plugins will lead to maintenance problems.</p> <p>Why there are no hooks on some of the views?</p> <p>Thanks.</p>
