Target version:				
Resolution:	Invalid		**Affected version:**	

Description

I am using the REST API in PHP. I have been successful in creating projects, but unsuccessful in creating subprojects.

I used the "parent_id" parameter as shown here: [#7404](#7404)

Here is the code I am using:

```
$rm_project = new Redmine_Project(array(
'name' => 'Project',
'identifier' => 'project1',
'description' => 'desc'
));
$rm_project->save();

$rm_sub_project = new Redmine_Project(array(
'name' => 'Sub Project',
'parent_id' => $rm_project->id,
'identifier' => 'subproject1',
'description' => 'testing'
));
```

History

#1 - 2012-03-12 19:41 - Justin Da Silva

- Status changed from New to Resolved

Sorry, my mistake... I forgot to run the save method on the subproject...

$rm_sub_project->save();

I have verified that the "parent_id" attribute does in fact work.
