Target version: 1.2.0	
Resolution: Fixed	
Description	
IMHO it could be great to differentiate saved queries: <ul style="list-style-type: none">- global vs project's local- public vs private This can be solved by adding icons, or maybe better: <ul style="list-style-type: none">- group queries into two groups: global and project's local, put divide between these groups (horizontal rule)- add icons for public/private - maybe one icon only for public or private will be ok. Logic can be also switched, so it can be grouped by Private/Public and flagged by icons per global/local.
