Redmine - Feature #10729

Embedded wiki pages should have their headings editable from the embedding page

Description

Embedding wiki pages is a neat feature that allows mixing different parts of documents to form other ones.

From a usability point of view, embedding a wiki page with headings should have the edit icon beside the headings just like the embedding page.

History

People would update the embedded page, which is also embedded in other pages, and by such update every of these embedding pages at once without any clue of what they're doing, it feels like potentially destructive to me.

As long as it adheres to the permission system, it should work fine.
