Redmine - Feature #10819

Using a plugin

Description

So I would like to use a plugin to redirect user to the wiki page but I am not sure what files I need to download. I went to http://github.com/edavis10/redmine_user_homepage but I am unsure of what files I need.

Can anyone assist? I am on Redmine 1.3.3 with Ubuntu Server 12.04

Thanks
