Description	
<p>When working with redmine, one sometimes needs queries based on activity history.</p> <p>Basically, current "activity" tab and the "history" section of every issue page do perform a fixed query. It would be helpful to allow users to perform a variety of queries.</p> <p>Examples of meaningful queries :</p> <ul style="list-style-type: none">• list all activities of user john from date X to date Y• list all activities that reopen a bug from date X to date Y• list all activities that change assignee from date X to date Y• list all activities that change custom field F with previous value V, from date X to date Y• list all activities on bug ID=1234 where comment contains "foo"• list all activities without a comment <p>Like with current activity tab, the answer is a list of activity entries, not issues, so an issue ID may appear many times.</p> <p>Notice that the examples above do not involve join with issues, they query only on fields of activity entries themselves.</p>
