<b>Description</b>			
<p>Hi</p> <p>I have a bitnami native redmine 1.4.1 implementation in a RedHat 6 virtualized machine, and I configured reception mail with pop3 (<a href="http://www.redmine.org/projects/redmine/wiki/RedmineReceivingEmails">http://www.redmine.org/projects/redmine/wiki/RedmineReceivingEmails</a>).</p> <p>My command is like:</p> <pre>\$REDMINE_INST/ruby/bin/rake -f \$REDMINE_ROOT/Rakefile --silent redmine:email:receive_pop3 RAILS_ENV="production" host=nn.nn.nn.nn username=redmine password=xxxxxxx project=MyProyect tracker=Bug allow_override=project,tracker no_permission_check=1"</pre> <p>If the users write correctly the "Project:" word, but the project identificator isn't correct (e.g.:desa_001 instead desa_0001), mail is marked as read, but I have not this in my project. Obviously, because allow_override is configured.</p> <p>How can I handle this issue? can I control the project identifier?</p> <p>I think about other command immediately next, without to override the project, handling these cases. But the risk is any correct mail received between both commands.</p> <p>Thanks for any idea.</p>
