

Redmine - Defect #11274

Repository edit link is incorrect when running in a sub-URI

2012-06-27 12:26 - Achim Gaedke

Status:	Closed	Start date:	
Priority:	Normal	Due date:	
Assignee:		% Done:	0%
Category:	Project settings	Estimated time:	0.00 hour
Target version:		Affected version:	2.0.3
Resolution:	Wont fix		
Description Hi there! I'm running a apache2 fastcgi redmine (2.0.3) installation. It uses the Alias instruction and rewrite rules to get a "sub-URI" installation. Redmine::Utils::relative_url_root is set and the hack according to http://www.redmine.org/issues/11058 is applied. Everything works fine, except from five links: Project->Settings->Repositories->Users & Edit & Delete links and Project->Settings->Issue Categories->Edit & Delete links Do you have any clue what's wrong? Thanks & Cheers, Achim

- Subject changed from Project->Settings->Repositories->Edit link incorrect to Repository edit link is incorrect when running in a sub-URI

#2 - 2012-06-27 21:38 - Jean-Philippe Lang

Can't see what is wrong with this link. It uses the edit_repository_path method generated by Rails.

#3 - 2012-06-28 00:03 - Achim Gaedke

Thanks for looking into that issue.

The broken link looks like that
<https://server.ac.nz/repositories/1/committers>

I tried to work around these links by adding the sub-uri path
<https://server.ac.nz/redmine/repositories/1/committers>
<https://server.ac.nz/redmine/projects/myproject/repositories/1/committers>
But they just result in a redmine404 error page.

In contrast to that the Project->Settings->Members->edit & delete buttons
<https://server.ac.nz/redmine/projects/myproject/settings#>
work well.

I followed the fastcgi & sub-uri instructions in:
http://www.redmine.org/projects/redmine/wiki/HowTo_configure_Apache_to_run_Redmine

I hope, I've described the set-up precise enough.

in the redmine source code tree, I do a svn diff:

```

#4 - 2012-10-15 10:58 - Jonathan Tee

is <http://www.redmine.org/issues/11881#note-14> working for you?

#5 - 2024-01-28 02:10 - Go MAEDA

- *Status changed from New to Closed*
- *Resolution set to Wont fix*

I am closing this issue because FastCGI support will be removed in the upcoming Redmine 6.0.0 ([#40092](#)).
