

Redmine - Defect #11568

Uploaded file name gets mangled when it contains a +

2012-08-02 06:53 - Olivier Mehani

Target version:		Affected version:	
Resolution:			
Description			
When uploading a file which names contains a "+", that character gets silently replaced by a space. I suppose this has to do with the parsing of the QUERY_STRING, but it is annoying there as the + should remain verbatim in the name of the file offered for download through Redmine.			
Steps to reproduce:			
<ol style="list-style-type: none">1. Create a file with a '+' in its name (say, "a+b");2. Upload it in the files section of a Redmine project3. The file appears as "a b", and the download link leads to ".../a%20b"			
While the file downloads correctly, it is inconvenient to have one's file renamed without control.

- File a+b added

#2 - 2012-08-02 06:55 - Olivier Mehani

Right, my experiment shows that I am not up to date. Is this a known bug that has already been addressed? I couldn't find it in the issues.

#3 - 2012-08-02 13:32 - Etienne Massip

- Category set to Attachments

- Status changed from New to Confirmed

- Target version set to Candidate for next minor release

Redmine.org is not running the latest version but [demo](#) is.

And indeed, it happens with trunk.

#4 - 2012-08-14 10:16 - Jean-Philippe Lang

Seems to be a Rails issue. The + is already replaced with a space in the original_filename found in attachment params:

```
"attachments"=>{"1"=>{"file"=>#<ActionDispatch::Http::UploadedFile:0x4c11fa8 @original_filename="test plus.txt",
@content_type="text/plain", @headers="Content-Disposition: form-data; name=\"attachments[1][file]\";
filename=\"test+plus.txt\"\\r\\nContent-Type: text/plain\\r\\n\", @tempfile=#<File:xxx/RackMultipart20120814-2236-ogyxbd>, "description"=>"}}
```

#5 - 2013-05-05 20:23 - Jean-Baptiste Barth

It works now fine on 2.3.1 and trunk, but confirmed broken on 2.2.4 and 2.1.6.

Relevant log on a fresh install:

```
redmine-2.2.4/log/development.log: Parameters: [...] "attachments"=>{"1"=>{"file"=>#<ActionDispatch::Http::Up
```

```
loadedFile:0x007fcb8a55e5d0
@original_filename="a b.txt", @content_type="text/plain", @headers="Content-Disposition: form-data; name=\"att
achments[1][file]\";
filename=\"a+b.txt\"\\r\\nContent-Type: text/plain\\r\\n\", @tempfile=#<File:/var/folders/2d/ym9f6qbd61x6_xxc51f17w
q40000gn/T/
RackMultipart20130505-96276-1v561qz>>, "description"=>"", [...]

```

```
redmine-2.3.1/log/development.log: Parameters: [...] "attachments"=>{"1"=>{"filename"=>"a+b.txt", "descriptio
n"=>"",
"token"=>"1.0d599f0ec05c3bda8c3b8a68c32a1b47"}} [...]

```

The fix is probably related to [r10977](#) ?

Now that it works I think we need to add some tests to ensure it won't break again.

While the file downloads correctly, it is inconvenient to have one's file renamed without control.

No problem on Redmine 3.0.0.
It seems that we can close this issue.

#7 - 2020-03-20 17:35 - Toshi MARUYAMA

- Status changed from Confirmed to Closed
- Target version deleted (Candidate for next minor release)

No problem on Redmine 4.1.
