We found out that it works when you enable the column "parent task" and sort by it. We additionally provide a number to each task to have the sorting as desired (see screenshot).

We're using the current **Redmine version 2.1**

Resolved?

No

The main task is to make wrap and unwrap levels of issues to give facilities for more easily work with big projects with many issues.

#5 - 2012-10-02 22:39 - LEXO IT Services Switzerland

True. wrap/unwrap is not (yet) possible. Although a structural layout is already implemented. I think it should not look like GANTT. More like a Windows Explorer tree structure. But how would you display linked issues?
