

Redmine - Defect #11735

Weird diffs in wiki pages.

2012-08-29 22:44 - yac yac

Status:	Closed	Start date:	
Priority:	Normal	Due date:	
Assignee:		% Done:	0%
Category:	Wiki	Estimated time:	0.00 hour
Target version:		Affected version:	2.0.3
Resolution:	Duplicate		
Description <p>I have a wiki page which has like 50 lines on revision N. on revision N+1 a few lines were modified and on lines about 2 to 15. But the diff displays lots of content in dark green even though it has not been changed. Also it contains <code></code> tags as part of the diff. Here I also downloaded the revision as TXT and confirmed there are no changes by using <code>`diff -u`</code> on them.</p> <p>I tried to reproduce it but was unsuccessful but i believe i sitll got a weird result. I screencaped it and attached to this issue. On the screencap I believe the "b2" should be marked green as added. and "b" marked red as removed and other lines unhighlighted.</p> <p>I was also unable to find where is documented what those colors mean, so im basing my thoughts on my common sense and guesswork. Light green looks like marks line modification and dark green <i>the</i> actual modification. So clarification on this would be appreciated.</p> <p>Also after a while of thinking I guess maybe those <code></code> tags suggests there is really an issue with generating proper diff html.</p> <p>I don't know how the Prioritues of issues work in these community, so I'm leaving normal but I think this is really big defect as it prevents people keeping up to date with wiki changes.</p>			
Related issues: <p>Is duplicate of Redmine - Defect #11209: Wiki diff may generate broken HTML</p>

History

#1 - 2012-09-06 11:25 - Jean-Philippe Lang

- Status changed from New to Closed
- Resolution set to Duplicate

Seems to be the same as [#11209](#) which is already fixed in trunk.
