Redmine - Defect #11946

Mailhandler reply security hole

2012-09-26 08:58 - Kevin Neuenfeldt

Status:	New	**Start date:**	
Priority:	Normal	**Due date:**	
Assignee:		**% Done:**	0%
Category:	Email receiving	**Estimated time:**	0.00 hour
Target version:			
Resolution:		**Affected version:**	2.1.0

Description

I don't know if this is the expected behavior but I recognized that it's possible to reply to an issue of another project than the one specified in the /etc/aliases file.
Assume I have an /etc/aliases file with a line like this one:
foo: "| /opt/redmine/extra/mail_handler/rdm-mailhandler.rb --url=http://localhost:8080 --key=XXXX --project=foo --unknown-user=ignore"

Now I send an email to foo@someurl.net with subject *"Re:[#123]"* and 123 is the id of an issue that is not part of project *foo*, anyway the email is not refused.

I would expect that this should not be possible because I limited that emailadress to project *foo*.

History

#1 - 2012-09-27 22:17 - William Roush

This would need to be a flag in the command line I would think: there are many of us that have project set as a *default* box, but are still listening to system-wide replies on this e-mail address.

#2 - 2012-09-28 00:14 - Jean-Philippe Lang

Indeed. The --project option is for setting the default project for new issues, not to restrict the replies to a given project.

#3 - 2012-10-01 12:25 - Kevin Neuenfeldt

As far as I know there is no option *--issue* yet, even in the new redmine 2.1.0.
Is there any need so I could make a request for a future release?
