| <b>Description</b>  |                    |                          |           |
| I'm trying to make download link to a file from svn-repository. If i write in issue:  |                    |                          |           |
| <pre>export:"NSK130/branches/Release/O131.hex"</pre>  |                    |                          |           |
| I get:  |                    |                          |           |
| <pre>http://localhost:50080/projects/skudopp-nsk-131-sw/repository/entry/NSK130/branches/Release/O131.hex.raw</pre>         |                    |                          |           |
| -----   |                    |                          |           |
| -----   |                    |                          |           |
| Instead of:   |                    |                          |           |
| <pre>http://localhost:50080/projects/skudopp-nsk-131-sw/repository/raw/NSK130/branches/Release/O131.hex</pre>               |                    |                          |           |
| -----   |                    |                          |           |
| -----   |                    |                          |           |
| And of course then obtain 404-error.  |                    |                          |           |
| PS: Quotes removal has no effect  |                    |                          |           |
