Do you mean to see the name of the attachment only? Or to have their contents viewable in browser?

Yes,attached documnet's contents viewable in browser.
Just like google docs.
Thanks Massip!!!

What's the distinction from a security POV between being able to see contents but not to download the file?

#5 - 2012-11-16 13:48 - ahsan akhter

if downloads allows then restricted user can copy the original physical file from one location to another and it can be uses illegally.
I want just they can view the content on the browser only.

Thanks Massip to ur response.

If they can see the contents then they'll be able to copy/paste it in a new file on their HD which will eventually be a copy of the original file, I still don't get it?

I think this requirement should not be done by redmine platform.

A popular method is, using a flash object to show the file content (image, text, etc).

#8 - 2012-11-19 11:29 - ahsan akhter

Thanks Massip and fangzheng for your kind response.....!
