Do you mean to see the name of the attachment only? Or to have their contents viewable in browser?

#2 - 2012-11-15 16:16 - Etienne Massip

- Status changed from New to Closed

- Resolution set to Invalid

BTW, see #7750.

Yes,attached documnet's contents viewable in browser.

Just like google docs.

Thanks Massip!!!

What's the distinction from a security POV between being able to see contents but not to download the file?

#5 - 2012-11-16 13:48 - ahsan akhter

if downloads allows then restricted user can copy the original physical file from one location to another and it can be uses illegally.

I want just they can view the content on the browser only.

Thanks Massip to ur response.

I want just they can view the content on the browser only.*

If they can see the contents then they'll be able to copy/paste it in a new file on their HD which will eventually be a copy of the original file, I still don't get it?

I think this requirement should not be done by redmine platform.

A popular method is, using a flash object to show the file content (image, text, etc).
