

Redmine - Feature #12532

"Improve visibility of the "test email configuration" link"

2012-12-07 08:31 - Florian S.

Status:	Reopened	Start date:

Target version:			
Resolution:			
Description			
Having an option to test the email server settings via redmine web interface would be great. Just a "send test mail" button with an additional input field for an email address that should receive a test mail would help.

- Resolution set to Invalid

There is already a "Send a test email" link at the bottom of the page which will send a test email to the logged admin user.

Thanks for this hint, I think I was blind. Maybe I expected a button and did not see the link...

#3 - 2013-04-09 17:18 - Daniel Biddle

I wondered why there wasn't a test email feature, found people online mentioning it, looked for it on the page, didn't see it, found this issue and read the comments, looked carefully at the bottom of the page and finally saw it.

It seems the combination of its understated design and its position in the lower right of the page – outside the [F-shaped pattern](#) – can make the link almost invisible, even to people looking for it.

I suggest moving it to the left, like the way 'Preview' is next to 'Submit' when updating an issue.

- Status changed from Closed to Reopened

We should change the title of this ticket to **"Improve visibility of the "test email configuration" link"**

Because I also think that the small improvement Daniel Biddle wrote could help many users I'm reopening this ticket.
