

## Redmine - Patch #12721

### Optimize MenuManager a bit

<b>Description</b>			
<p>In a project without the modules repository, wiki and boards, the following queries are needlessly executed:</p> <pre>Wiki Load (0.3ms) SELECT `wikis`. * FROM `wikis` WHERE `wikis`.`project_id` = 1 LIMIT 1 (0.5ms) SELECT COUNT() FROM `boards` WHERE `boards`.`project_id` = 1 Repository Load (0.7ms) SELECT `repositories`. FROM `repositories` WHERE `repositories`.`project_id` = 1 AND (is_default = 1) LIMIT 1</pre> <p>In cases where issue tracking and file modules are not enabled, this is also not needed:</p> <pre>(0.7ms) SELECT COUNT(DISTINCT `issues`.`id`) AS count_id, tracker_id AS tracker_id FROM `issues` LEFT OUTER JOIN `projects` ON `projects`.`id` = `issues`.`project_id` LEFT OUTER JOIN `issue_statuses` ON `issue_statuses`.`id` = `issues`.`status_id` LEFT OUTER JOIN `trackers` ON `trackers`.`id` = `issues`.`tracker_id` WHERE (projects.status=1 AND projects.id IN ( SELECT em.project_id FROM enabled_modules em WHERE em.name='issue_tracking')) AND ((projects.id = 1 OR (projects.lft &gt; 1 AND projects.rgt &lt; 2))) GROUP BY tracker_id</pre> <p>The reason is in allowed_node? in Redmine::MenuManager::MenuHelper. It first checks extra conditions, then checks if the user is allowed to perform an action. The user permission check in turn checks if a module is enabled. The patch changes the order in which the checks are executed: First the permissions, then the extra conditions. A win of 1.5-3ms per call on my system.</p>

+1 from me.

Lesser requests for the same goal, are always a good idea. ;-)

#2 - 2013-01-04 09:22 - Jean-Philippe Lang

- Status changed from New to Closed

- Target version set to 2.3.0

Patch committed in r11112, thanks for pointing this out.
