

Redmine - Feature #12793

Roadmap - Version 2.2.1 could be closed

2013-01-10 07:17 - Daniel Felix

| | |
|--|----------------------------------|
| Status: Closed | Start date: |
| Priority: Normal | Due date: |
| Assignee: | % Done: 0% |
| Category: | Estimated time: 0.00 hour |
| Target version: | |
| Resolution: Fixed | |
| Description As described in subject. By the way, could you add some tracker type like "Task" on redmine.org. Task could be handled for such requests like this or for example if there is a new release. Task: "Update Changelog for new release". This is in my opinion no Defect, Feature or Patch. But maybe it's useful for you too, to see which tasks must be done in the next x days. Best regards, Daniel | |

Wouldn't another tracker be misunderstood by normal users and used for filing bugs / patches?

I'm afraid that people will create tasks like "Merge my patch that I filed some weeks ago in [#12664](#)"...

I'm not against a tracker "Task" - personally, I put my requests in "Feature": [#12785](#), [#12786](#)...

Well, this wouldn't be a problem. You can configure redmine that only some role could create tickets of this type. So, if only contributors could create tickets of this type, this problem should be solved. :-)
