

Redmine - Feature #12796

Display user's groups on profile

2013-01-10 13:05 - Scott Roland

Status: Closed	Start date:
Priority: Normal	Due date:
Assignee: Jean-Philippe Lang	% Done: 0%
Category: Groups	Estimated time: 0.00 hour
Target version: 4.1.0	
Resolution: Fixed	
Description	
When I go to My account page, I would like to be able to see which groups I am a member of: http://demo.redmine.org/my/account	
The listed groups should link to their individual group pages. This would require a fix for Bug #12795 (Non-admin users cannot get info about groups).

Revision 17973 - 2019-03-15 12:49 - Jean-Philippe Lang

Display user's groups on profile (#12796).

Only for admins or when viewing its own profile.

This is a very important feature, especially when you have a huge number of users.

#2 - 2019-02-19 08:23 - M.Moorad HEETUN

Hello,

there is a workaround for this. If for example you want to get to know the members of the group A, create a test ticket and assign it to the group A, then you will receive a notification by mail and you will get all the users in that particular group.

Hope that helps.

Best Regards

- File 0001-Show-user-groups-in-user-profile-page.patch added

- File admin.png added

- File non-admin.png added
- Target version set to Candidate for next major release

Here is a patch that adds to the user profile page the groups in which the user is a member of.

If the current user is admin, the group name links to edit group membership page from administration, otherwise, it is just the group name. In the future, we can easily extend the link_to_group method to point to a group profile page and implement #12795.

#6 - 2019-03-15 00:47 - Hinako Tajima

The patch written by Marius BALTEANU shows all the groups which the user belongs appears on the user's profile page, but I wondered it may cause security problems.

Group names include important information such as organization names, product names, service names. Those names may not want to be seen by anyone except members of a particular project.

In order to avoid sensitive information is unintentionally disclosed to all users, I suggest that group visibility follow the same settings as the role's users visibility.

What to say when users visibility setting is set to "Members of visible projects", the current user should be able to see groups only when the current user is a member of the project.

I'm not sure that I fully understand your proposal. My proposed patch just adds to the user profile page the user's groups. If the current user has rights to see the profile page (login, first name, last name, custom fields, etc) of another user (based on his role permissions), it'll see also the groups. I think we complicate too much if we try to show only the groups that contain members of his visible projects (if this is the request).

#8 - 2019-03-15 12:52 - Jean-Philippe Lang

- Status changed from *New* to *Closed*
- Assignee set to *Jean-Philippe Lang*
- Target version changed from *Candidate for next major release* to *4.1.0*
- Resolution set to *Fixed*

I understand the issue. The request was about viewing its own groups so a safer solution is to display the groups for administrators and the current user only. I've updated Marius' patch accordingly, thanks.

#9 - 2019-05-12 08:43 - Go MAEDA

- Subject changed from *There is no way for a user to find out which groups they are a member of to Display user's groups on profile*
