Description	
<p>maybe adding some (customizable) keywords to set issue done ratio to a given value would be fine:</p> <p>text for commit refs #12345@done +10 => add 10 percent to issue done ratio</p> <p>text for commit refs #12345@done 90 => set issue done ratio for ticket to 90 percent</p> <p>text for commit refs #12345@done -10 => subtract 10 percent from issue done ratio - sometimes things go wrong and there is more work to do than it seemed before:::</p> <p>just as a small example.</p> <p>... and again: thanks to the redmine team for the great work! :-)</p>
