

Redmine - Defect #1317

Mantis migration - encoding mismatches

2008-05-28 12:08 - Leszek Ciesielski

Status:	New	Start date:	2008-05-28
Priority:	Normal	Due date:

Target version:		Affected version:	
Resolution:			
Description			
<p>I am using the svn-head version of Redmine. When I try to migrate an existing Mantis setup (databases use LATIN2 encoding AFAIK), I can either:</p> <ul style="list-style-type: none">- migrate with encoding[UTF-8] (I just leave the default) - this botches the user names and ticket texts quite a lot- try to change the encoding used by rake - this breaks with <pre>encoding [UTF-8]: LATIN2 rake aborted! Validation failed: Lastname activerecord_error_invalid</pre> <p>Any ideas what encoding could work (I tried several, everything other than UTF-8 gives the same error)? And BTW, could the script just autodetect it, like phpmysqladmin does?</p> <p>The original database export is 40MB after compression, but if someone is willing to work on this I can trim it down and attach a smaller repro.</p>			

History

Your user names may contain unexpected characters. See source:/trunk/app/models/user.rb@1443#L57

#2 - 2008-06-02 16:11 - Leszek Ciesielski

- File usernames.zip added

'username' contains ASCII, 'realname' contains polish letters. When I try to import with ASCII in 'realname' it succeeds, but I get garbled text in ticket messages, which probably means I used a wrong encoding :-)

Attached is an sql dump of the user table.
