Description

Hi,

I upgraded our installation to the current trunk. One bug that i've noticed is that I can't properly delete a watcher from an issue.

Revision 11443 - 2013-02-20 21:43 - Jean-Philippe Lang

Fixed that delete watcher link was broken by r11290 (#13231).

Deleting a watcher now use DELETE /watchers instead of POST /watchers/destroy.

After that bug, somehow, on my production system one of the people that was added as a watcher when the bug was active, now receives the notification mail for **each new issue** in the project (and I think even for other projects). I always see him in to: field of the sent email while other watchers are in cc field.

How do I fix this ? I guess manual database intervention is required.

Which target version will this be available?

AFAIK, stable releases were not affected. The fix is commited in trunk already.
