Description

Our Redmine site has multiple individuals sharing the same last and first names. These people cannot be distinguished on the user assignment drop down list. Either the user assignment list should show the userid together with the assigned name or the user name should provide for middle name(s). Actually, I suggest that both be done; provide for user middle names and initials and also show the login id on the drop down lists.

User Drop Down Now:

John Smith
John Smith
John Smith

Proposed:

John H. Smith (smithjh)
John Millen Smith (smithjm)
John Miller Smith (msmithj)
