Target version: Candidate for next minor release	
Resolution:	
Description	
<p>If there are multiple SCM per project (possible since 1.4.0, cfr #779), it would be nice to add the SCM identifier in the associated revisions overview.</p> <p>For example:</p> <hr/> <p><i>Associated Revisions</i></p> <hr/> <p><i>scm01 - Revision 999</i> <i>Added by ...</i> <i>Bugfix for #...</i></p> <p><i>scm02 - Revision 555</i> <i>Added by ...</i> <i>Update of documentation for #...</i></p> <p>Also in the detail of the revision, mentioning the SCM identifier would be nice.</p> <p>P.S.: SCM identifier must be known by users if they want to reference the SCM-revision in wiki text</p>

(snip)

#3 - 2013-04-09 12:34 - Wim DePreter

I've noticed also another thing, when there are commit-messages in a certain SCM (not default in project) referencing another revision, f.e. r555, the revision in these commit-messages are interpreted by Redmine as hyperlinks, but referring to the default SCM.

Imho, the default SCM in commit-messages of an SCM should be the SCM itself (and not default SCM from Redmine)

+1.

I have one more aspiration on this front. When the commit is associated to revision it says "Revision 555". It would ideal if it can also point out if this revision was on 'trunk' or specific 'branch'.

Related feature for mentioning trunk/branch: #5386

I would keep the 2 features seperated, cause the info for my request is normally available in Redmine (no interpretation of SCM data necessary)

#6 - 2013-04-15 12:07 - Wim DePreter

The SCM identifier is already mentioned in the activity overview, so same style should be used in associated revisions / detail of revision
