Description

Hi there,

I created a small patch, which allows you to display the description of the parent issue in the subissue form. This function could be allowed/disallowed in the system settings.

This functionality could be useful, if you have bigger workpackages and try to divide them in smaller tasks. This way, each user can track the parent issue description.

In addition to the functionality, I added two labels in en.yml, en-gb.yml and de.yml and reorganized the corresponding blocks.

I can try to define tests for these issues, even if I'm not the best testcase developer. ;-)

For further information, please take a look at the attached .diff and my screenshots.

Best regards,
Daniel

Did you sort en.yml and en-GB.yml?
It is difficult to know what translation keys are added.

#2 - 2013-05-13 13:50 - Daniel Felix

Hi Toshi,

yes they were sorted.

I haven't changed any translations, just the order.

But in order to answer your request, de.yml isn't sorted.
I added the following translations:

setting_parent_issue_description: Allow display of parent issue description
field_parent_description: Parent Description
