Description

Sometimes an Excel/Spreadsheet Export of Tickets is required (e.g. to report to your manager, Presentations). Descriptions cannot be exported (or just fragmented) as standard CSV does not support newlines in Fields.

My feature request suggests an Excel-XML-export similar as implemented in mantis-bugtracker, which allows also export of Fields containing newlines correct/uncorrupted to XML/Srpeadsheet/Excel.

Thanks!

PS: found PDF-Export as best (wrongly) matching category - maybe category "PDF-Export" should be changed to "Ticket-Export"?
