

Redmine - Feature #14472

Allow "live" time tracking on tickets by adding "Start work" and "Stop work" buttons/icons

2013-07-17 08:34 - Anonymous

Resolution:	Duplicate		
Description (reopen of Feature #14387): Time tracking is one of the most hated (and needed) features of project/task management. An elegant way to support easy time tracking is to do time tracking by pressing "Start work" and "Stop work" when working on a ticket (ideally would also been "Pause"). Currently the redmine-user has to write down the time when started working on a ticket, when stopped working and then calculate time spent and finally add this to the redmine ticket. I currently am using the start/stop functionality in an other product to track my time. An additional effect is, that "live" booking time onto a ticket also helps me to stay focussed on this work (and resist to distractions). If implementing that, you have to think about parallel tickets being booked time on. If allowed, there has to be a possibility to find all your "current" tickets you are spending time on. If there is only one, you should (maybe in "activity") be able to navigate to this. Thanks a lot Comment: tried time tracker plugin (Delaitre, 0.4 (2011-01-17)): does not work / only compatible with redmine 1.x --> issue logged again. Maybe someone to update the plugin? - thanks again

Feature Request [#14387](#) was by mistake set to resolved by me. As stated in comment to [#14387](#) I found a plugin which provides the desired functionality (time_tracker_plugin). Having this installed I found out it does not work (not compatible with current version of redmine, only compatible with 1.x). As I am not permitted to change from "resolved" to "reopened" I logged the feature request again ([#14472](#)) which was then closed by Jan. Fortunately I am permitted to reopen this one - what hereby I am doing.

Thanks

W.
