<b>Target version:</b>		<b>Affected version:</b>	2.3.2
<b>Resolution:</b>			
<b>Description</b>			
<p>Hello, thanks for developing Redmine. I am experiencing a bug with per-file diff and file view urls in revision pages which return 404 (not found). Let me try to explain how to reproduce it:</p> <p>1) Create a project and a subproject 2) Add repositories (we are using svn) to project and subproject: Project: svn://host/myrepository with id repository Subproject svn://host/myrepository/folder with id sub-repository 3) Commit something into svn://host/myrepository/folder 4) Two entries appear in activity list in project and one in subproject 5) The project entry is fine but the subproject entry has wrong urls (accessing from both places) to files and diffs <a href="http://host/redmine/projects/subproject/sub-repository/revisions/1/entry/folder/myfile.cpp">http://host/redmine/projects/subproject/sub-repository/revisions/1/entry/folder/myfile.cpp</a> <a href="http://host/redmine/projects/subproject/sub-repository/revisions/1/diff/folder/myfile.cpp">http://host/redmine/projects/subproject/sub-repository/revisions/1/diff/folder/myfile.cpp</a> instead of <a href="http://host/redmine/projects/subproject/sub-repository/revisions/1/entry/myfile.cpp">http://host/redmine/projects/subproject/sub-repository/revisions/1/entry/myfile.cpp</a> <a href="http://host/redmine/projects/subproject/sub-repository/revisions/1/diff/myfile.cpp">http://host/redmine/projects/subproject/sub-repository/revisions/1/diff/myfile.cpp</a> or <a href="http://host/redmine/projects/subproject/repository/revisions/1/entry/folder/myfile.cpp">http://host/redmine/projects/subproject/repository/revisions/1/entry/folder/myfile.cpp</a> <a href="http://host/redmine/projects/subproject/repository/revisions/1/diff/folder/myfile.cpp">http://host/redmine/projects/subproject/repository/revisions/1/diff/folder/myfile.cpp</a></p> <p>Basic information about my installation:</p> <p>Environment: Redmine version 2.3.2.stable.12037 Ruby version 1.9.3-p448 (2013-06-27) [i386-darwin10] Rails version 3.2.13 Environment production Database adapter Mysql2 Redmine plugins: no plugin installed</p> <p>However, I was able to reproduce it on older versions too.</p>

<http://host/redmine/projects/subproject/sub-repository/revisions/1/entry/folder/myfile.cpp>  
<http://host/redmine/projects/subproject/sub-repository/revisions/1/diff/folder/myfile.cpp>

I've created a repository in a subproject than points to a subdirectory of svn and I can't reproduce. On which page do you see these 2 links that lead to a 404?

##### #2 - 2013-07-28 13:32 - Vitaly vit9696

This one:

<http://host/redmine/projects/subproject/sub-repository/revisions/1>

##### #3 - 2014-02-16 13:25 - Vitaly vit9696

Can be reproduced on 2.4.X branch, as it seems. Do you need any extra information to resolve this bug?
