Target version:			
Resolution:			
Description <p>This feature is an extension to the existing “Reports” plugin. A useful utility for managers, PMO (Project management office) and sales, you can generate reports in redmine as always but with one additional parameter “Utilization”. This appends data logs with a percentage calculated against number of hours you define for a work day via the admin route. Percentage is auto-calculated for any details you add to you report (daily, weekly, monthly or yearly). The parameter can be selected from the “Add” drop down.</p> <p>Note: This parameter will only appear for selection if one of the main select criteria's are selected. See attached images for more details.</p> <p>The patch can be directly used in Redmine Core. No migrations.</p>
