Redmine - Defect #14965

QueryColumn::sql_for_field assumes that operators "issue is opened/closed" deal with field named 'status_id' only - not extendable

2013-09-22 14:20 - Egor Suvorov

Status:	Closed		**Start date:**	
Priority:	Normal		**Due date:**	
Assignee:			**% Done:**	0%
Category:	Database		**Estimated time:**	0.00 hour
Target version:				
Resolution:	Invalid		**Affected version:**	

Description

While trying to add some custom filters I found out that even if you call sql_for_field with specific table and field name, it still uses #{queries_table_name}.status_id as field in generated WHERE statement. You can see the problem in /app/models/query.rb:687

I'd like to change it to #{db_table}.#{db_field} (this seems more extendable and corresponds with what is written in another operators' code).

History

#1 - 2013-09-22 14:25 - Egor Suvorov

Forget to mention: usage of #{queries_table_name} also looks very strange, all other operators use #{db_table} instead. That was the main problem for me - I had to select all TimeEntry which are related to closed issues, and #{queries_table_name} was TimeEntries instead of Issues.

#2 - 2019-01-10 03:59 - Marius BĂLTEANU

- Status changed from New to Closed

- Resolution set to Invalid

Query model has been refactorized in the recent Redmine versions and there is no such limitation.
