

Redmine - Patch #15118

Deprecate and rename rss_* methods to atom_* methods

2013-10-14 01:34 - Mischa The Evil

History

#1 - 2013-10-14 01:59 - Mischa The Evil

The affected methods are MyController#reset_rss_key, User#rss_key and User.find_by_rss_key.

Daniel Felix wrote in #13460-8 (note-8):

Hopefully the way I use to deprecate those methods is good enough for the implementation. :-)

Pretty much I think, though some of the deprecation warnings used in the patch are not correct: 1. the warning for MyController#reset_rss_key reads:

"My#reset_rss_key is deprecated and will be removed in Redmine 3.0. Please use #reset_atom_key instead."

this should be

"MyController#reset_rss_key is deprecated and will be removed in Redmine 3.0. Please use MyController#reset_atom_key instead."

2. the warning for User#rss_key reads:

"User.rss_key is deprecated and will be removed in Redmine 3.0. Please use User.atom_key instead."

this should be

"User#rss_key is deprecated and will be removed in Redmine 3.0. Please use User#atom_key instead."

For 1:

- My#reset_rss_key says that reset_rss_key is an instance method of My (suggesting that My is an existing model in the Redmine core, which

isn't), whereas the change you've made is in the `reset_rss_key` instance method of `MyController`

- I think it is better to include the class name when redirecting (in text obviously :) the user to the new, replacing method

For 2:

- `User.rss_key` refers to a *class* method in the `User` class, while in the Redmine core `rss_key` is an *instance* method in the `User` class

#2 - 2013-10-14 02:06 - Mischa The Evil

- Related to Patch #13460: All translations: RSS -> Atom added

#3 - 2021-08-22 10:52 - Mischa The Evil

- Target version changed from Candidate for next major release to 5.0.0

Shall we finally properly deprecate this in 5.0.0 and remove it in subsequent minor 5.x.x release (e.g. 5.1.0 or 5.2.0)?

#4 - 2021-08-24 01:59 - Go MAEDA

I agree.

#5 - 2021-08-25 04:53 - Mischa The Evil

Go, do you need a new, rebased patch file or do you prefer to do the search and replace and the addition of the deprecation messages (modified according to my comments in note#1) locally yourself?
