<b>Description</b>			
<p>Hy,</p> <p>First I was looking an answer on this <a href="#">#1007</a> and it work perfectly. The point is that a user that is connected with a non member profile will be able to create project. This part is not really a problem if redmine keep confidential. Yet sometimes, you use a ldap user creation on the fly and you manage customers and colleague through ldap. From now, every user that is created is able to create project because there is only ONE default profile.</p> <p>I think it would be useful to have default profile that could be associated in ldap conf and also available in internal authenticate method.</p>
