Redmine - Feature #15289

Recalculate priority of a parent issue automatically after child issue is closed

2013-11-07 09:17 - Anonymous

Target version:				
Resolution:	Duplicate			

Description

A ticket's priority cannot be edited if the ticket has subtasks.

- subtask a very very urgent
- subtask b normal
- subtask c very very low

It seems as the highest priority of a subtask will be passed to the parent issue.

In the case above the parent's priority is very very urgent.

After ticket a and b are closed ticket c remains but the priority of the parent still is very very urgent.

I think recalculating the parent's priority after a ticket of a sub task is finished and using the highest priority of remaining tickets would help much for the daily work...

I fully agree with this idea. Priority is something dynamic. You can have a main task that has a subtask to urgently provide a workaround while another subtask takes care with lower prio of tackling the root cause in a clean way. This happens quite often in practice to us too.

+1 for this!
