

Redmine - Defect #15377

bundle install --without development test fails

2013-11-18 05:19 - Tod Beardsley

<b>Status:</b>	Closed	<b>Start date:</b>	
<b>Priority:</b>	Normal	<b>Due date:</b>	
<b>Assignee:</b>	Jean-Philippe Lang	<b>% Done:</b>	0%
<b>Category:</b>	Rails support	<b>Estimated time:</b>	0.00 hour
<b>Target version:</b>	2.5.0	<b>Affected version:</b>	2.4.0
<b>Resolution:</b>	Cant reproduce		
<b>Description</b>			
When installing per the instructions at <a href="http://www.redmine.org/projects/redmine/wiki/RedmineInstall">http://www.redmine.org/projects/redmine/wiki/RedmineInstall</a>  bundler completes without incident. However, I am unable to `rake generate_secret_token` (the next step)  I get the message:  <pre>redmine@shawshank ~/redmine-2.4.0 \$ rake generate_secret_token Could not find gem 'database_cleaner (&gt;= 0) ruby' in the gems available on this machine. Run `bundle install` to install missing gems.</pre> This is because database_cleaner is part of the test section.  Solution: move database_cleaner out of test and into main  Workaround: bundle install --without development # maybe, trying this now.

Revision 12298 - 2013-11-18 22:56 - Jean-Philippe Lang

Removed database\_cleaner dependency (#15377).

History

#1 - 2013-11-18 05:24 - Tod Beardsley

```
redmine@shawshank ~/redmine-2.4.0 $ ruby -v
ruby 1.9.3p194 (2012-04-20 revision 35410) [arm-linux-eabi]
redmine@shawshank ~/redmine-2.4.0 $ rails -v
Could not find gem 'rmagick (>= 2.0.0) ruby' in the gems available on this machine.
Run `bundle install` to install missing gems.
```

Currently stepping through the remaining missing requirements.

- Status changed from New to Closed
- Resolution set to Invalid

Please head over to the [Help](#) forum and post your support request there instead of posting it here as a defect in the tracker.

#3 - 2013-11-18 14:22 - Tod Beardsley

- Status changed from Closed to Reopened

It's not a support request (stepping through the rest of the requirements lead to no surprises). The fact of the matter is, the documented installation procedure is incorrect. I'm doing fine, but `bundle install --without development test` leads to a broken installation that needs to be repaired. Not exactly a rewarding OOB experience.

Not to worry, I can provide patches (just not at this moment). I suspect just moving database\_cleaner to the main bundler set will do the trick, or, instructing users to install the rails gem first (iirc, Rails also provides database\_cleaner).

**#4 - 2013-11-18 22:53 - Jean-Philippe Lang**

- Resolution changed from Invalid to Cant reproduce

rake generate\_secret\_token runs just fine for me when using bundle install --without development test. I'll remove this dependency anyway as it's no longer needed.
