

Redmine - Feature #15633

Allow CSS overriding for (3rd party) module's stylesheets

Description	
<p>I use some plugins and now I want to customize one plugin's output via my own redmine theme (application.css)</p> <p>Overriding the plugin's classes with a theme specific application.css is not possible because the css of the plugin is included after the theme stylesheet is included.</p> <p>If the theme stylesheet loads after all plugin stylesheets were loaded overriding would be possible in an easy way.</p> <p>So I request a change of base.html.erb that the stylesheet of the theme is linked after all plugin stylesheets.</p>

Most of the time plugins are build on top of the base theme overriding values from the base theme.
I suggest writing a custom plugin, which overrides all those stylesheets. As far as I remember the plugins are loaded alphabetically, so you would have to choose the name of the plugin accordingly.
