Description			
<p>I can see above error suspiciously often. First I tried to migrate a plugin redmine_git_hosting and it gave me this:</p>

Website seemed to work well, just couldn't migrate this plugin. So I tried to change ruby version and check what will happen, so I changed ruby, installed new gems, and after that I got this - now on website:

```
uninitialized constant Redmine::Scm::Adapters::AbstractAdapter::CommandFailed (NameError)
/home/redmine/redmine-2.4.2/lib/redmine/scm/adapters/abstract_adapter.rb:30:in `
```

So now website doesn't work. What is this error about? Is this some kind of a bug or am I missing something?

I'm using new RVM on Ubuntu 12.04 with "redmine" system user that owns everything.

Hi there!

I'm the maintainer of the Redmine Git Hosting plugin https://github.com/jbox-web/redmine_git_hosting

I've done a fresh install of Redmine without the plugin and the error is still here.

I've applied the patch given by @pires https://github.com/jbox-web/redmine_git_hosting/issues/117#issuecomment-34422995 and it works.

Here's my config :

```
Environment:
  Redmine version      2.4.2.stable
  Ruby version         2.1.0-p0 (2013-12-25) [x86_64-linux]
  Rails version        3.2.16
  Environment          development
  Database adapter     Mysql2
SCM:
  Subversion           1.8.5
  Git                  1.8.5.4
