

Redmine - Patch #15982

Inconsistent wiki history functionality

2014-01-28 11:55 - Daniel Felix

Status:	New	Start date:	
Priority:	Normal	Due date:	
Assignee:		% Done:	0%
Category:	Wiki	Estimated time:	0.00 hour
Target version:			
Description			
Replace this source:trunk/app/views/wiki/history.html.erb#L25 line: <td class="checkbox"><%= radio_button_tag('version_from', ver.version, (line_num==2), :id => "cbto-#{line_num}") if show_diff && (line_num > 1) %></td>			
with: <td class="checkbox"><%= radio_button_tag('version_from', ver.version, (line_num==2), :id => "cbto-#{line_num}", :onclick => "\$('#cb-#{line_num-1}').attr('checked', true);") if show_diff && (line_num > 1) %></td>			
This way the click behaviour on the second checkbox row (to) would be the same as on the first (from).			
Best regards, Daniel			

History

Sorry for the wrong patch. This should be the right thing.

```
<td class="checkbox"><%= radio_button_tag('version_from', ver.version, (line_num==2), :id => "cbto-#{line_num}", :onclick => "if(#{line_num-1} >= $('#cb-#{line_num-1}').attr('id').replace('#cb-', '')){$('#cb-#{line_num-1}').attr('checked', true);}") if show_diff && (line_num > 1) %></td>
```

This way, the from box is just raised if the from value is older than the to value.

Could you provide a diff for this?
