

Redmine - Defect #16238

Redmine crashes with CKEditor plugin

2014-03-05 17:08 - Darth Vader

Status:	Closed	Start date:	
Priority:	Normal	Due date:	
Assignee:		% Done:	0%
Category:		Estimated time:	0.00 hour
Target version:		Affected version:	2.3.1
Resolution:	Invalid		

Description

Redmine Bitnami stack 2.3.1-0 on Windows 7 64 bit

When including the CKEditor plugin (only plugin included), Redmine runs for a while then shuts down. The log only shows:

```
Connecting to database specified by database.yml  
Connecting to database specified by database.yml
```

I tried to turn on verbosity in the log (`config.log_level = :debug`) but no additional messages are shown. Is there a way to debug where it is crashing or get additional logging? I realize this issue is more related to the plugin but the question about how to debug or increase logging is related to Redmine core.

I should mention separately that I am having issues with RMagick not calling ImageMagick properly.

History

#1 - 2014-03-05 22:45 - Toshi MARUYAMA

- Status changed from New to Closed
- Resolution set to Invalid
