| **Category:** | REST API | | **Estimated time:** | 0.00 hour |
| **Target version:** | | | | |
| **Resolution:** | | | **Affected version:** | 2.2.2 |

**Description**

It seems that this effects both 2.2.2-stable and 2.4-stable

1. Create Custom Field
2. Set as both searchable and filter
3. Assign to tracker and project

This returns only the issues with Custom Field ID 1 and value <value>
/issues.json?project_id=<projectid>&cf_x=<value>

This returns all issues
/issues.json?cf_x=<value>

The Wiki from what I can see does not indicate that the project_id is required, but it seems to be. Not sure if that is intended or not, but needs to be fixed or documented as such.

```
Environment:
  Redmine version                       2.2.2.stable
  Ruby version                          1.9.2 (x86_64-linux)
  Rails version                         3.2.11
  Environment                           production
  Database adapter                      PostgreSQL
```

Not sure if it matters or not, but I have 2.2.2-stable and 2.4-stable both installed on Heroku and both have the same issue.
