Description	
<p>Is there a way to have role based wiki's?</p> <p>I haven't played w/ the crm plugin, so apologize ahead of time if there is already a way to assign an organization or user to a specific set of wiki's which isn't viewable to all users.</p> <p>Still want the ability to have certain wiki's available to everyone. An easy work around is to put these notes into assigned issues and create a role where user can only see their assigned issue, but that isn't a very clean or flexible.</p>
