Description

Currently there is an option in Administration / Settings / Issue Tracking that either enables or disables the displaying of subproject issues on main projects. However, this option applies to both the Issues list and the Roadmap view, which is not exactly optimal... Could this please be split into two options instead?

I would like to have my "Issues" list show all issues from the current project branch (i.e., including subprojects) while the "Roadmap" view only displays issues and versions within the current project (i.e., excluding subprojects).

These issues would be much more clearly understood and used if they were set up as:

- Include subproject issues in Issues list
- Include subproject issues in Roadmap view
