Resolution:			
Description			
<p>Hy,</p> <p>Working with svn advanced integration perfectly.</p> <p>Everything work fine when just one repo is defined in the project con, everything is OK.</p> <p>Adding a second repo works fine but browsing the repo in http is forbidden with the redmine account.</p> <p>Would il be possible to make the apache match all the users of projects where the repo is declared.</p>
