Redmine - Feature #17153

Working Multiples svn in project and svn advanced integration don't allow to connect to other repo with the users

Description

Hy,

Working with svn advanced integration perfectly.
Everything work fine when just one repo is defined in the project con, everything is OK.
Adding a second repo works fine but browsing the repo in http is forbidden with the redmine account.

Would il be possible to make the apache match all the users of projects where the repo is declared.
